

The Rise of Electric Vehicles

Transcript:

Considerable progress in the uptake of electric cars and vans in the EU was made in 2022, with 21.6% of new car registrations being electric vehicles, totalling close to 2 million electric car registrations in one year, up from 1.74 million in 2021. The number of electric vans on European roads also continued to grow. Reaching a share of 5.5% of new registrations in 2022. In the last year, the number of newly registered battery electric vehicles increased by 25%. While the number of plug-in hybrid cars remains stable, battery electric vehicles accounted for the vast majority of electric van registrations in 2022.
